

Smart Specialization: Cross-linking Innovation & New Industry Policy

K. Debackere, KU Leuven
15.05.2014

THE CHALLENGE anno 2014

- **The need to align:**
 - Innovation Policy + New Industry Policy
- **Innovation Policy:**
 - 3% norm
 - Horizon 2020
 - EU $><$ national/regional R&D budgets ($\pm 5\%$)
- **New Industry Policy:**
 - Avoid the pitfalls of the past
 - Focus on consortium- & project-driven approaches
 - With an explicit transformation objective

THE NEXUS

- **Smart Specialization Strategy --- “3S”:**
 - Combining, linking Innovation Policy & New Industry Policy
 - Objective: the knowledge-based transformation of the industrial/business texture of a region or nation
- **What? Choices based on:**
 - Unique knowledge, innovation and economic capabilities present in a region or nation,
 - Clustering of activities on the basis of an entrepreneurial discovery process,
 - Supported by cycles of policy learning in a Triple Helix context and approach.

11-6-2014

3S TRANSFORMATION: 4 MODES

- **Transition** is one pattern of structural changes that a smart specialization strategy is likely to generate. Transition occurs when a new economic domain emerges from existing industrial commons (a collection of R&D, engineering, and manufacturing capabilities that sustain innovation). *E.g. the development and growth of a sustainable chemistry sector out of the present chemical industrial commons.*
- **Modernization** is another pattern. It is manifest when the development of specific applications of a general-purpose technology produces a significant impact on the efficiency and quality of an existing (often traditional) sector. *E.g. rejuvenating present, traditional manufacturing operations through the introduction of mechatronics' technologies.*
- **Diversification** in a narrow sense is a third pattern. In such cases the discovery concerns potential synergies (economies of scope, spillovers) that are likely to materialize between an existing activity and a new one. *E.g. diversification of traditional textile activities into a high value-added technical textiles industry.*
- A fourth strategic pattern involves the **radical foundation** of an economic activity domain. In this case, the discovery is that R&D and innovation in a certain field has the potential to make some activities progressive and attractive that had not been previously. *E.g. nanotechnologies for health via medical technology applications.*

THE ANALYTICAL BASIS

$$RCA = \frac{\frac{X_{e,s}}{X_{e,a}}}{\frac{X_{r,s}}{X_{r,a}}}$$

LEGEND

Variable:

X = the activity considered (export, patents, publications, ...)

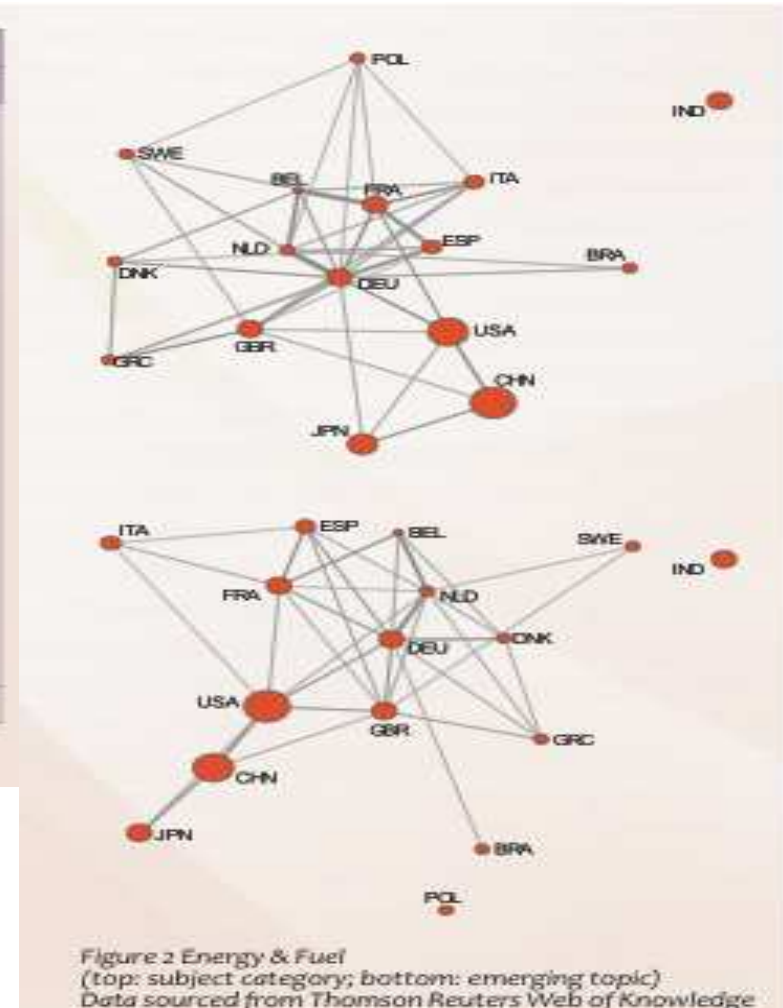

Subscripts:

e = the focal entity (country or region), r = the reference group of entities (countries or regions),
s = the activity considered (e.g. technology domain or economic sector), a = all activities considered

What about Flanders?

- From TH (Triple Helix) to TL (Triple Leverage):
 - Cluster investment (e.g. LS – SIP – SOC)
 - Coupled to bottom-up funding instruments
 - Coupled to Horizon2020 instruments

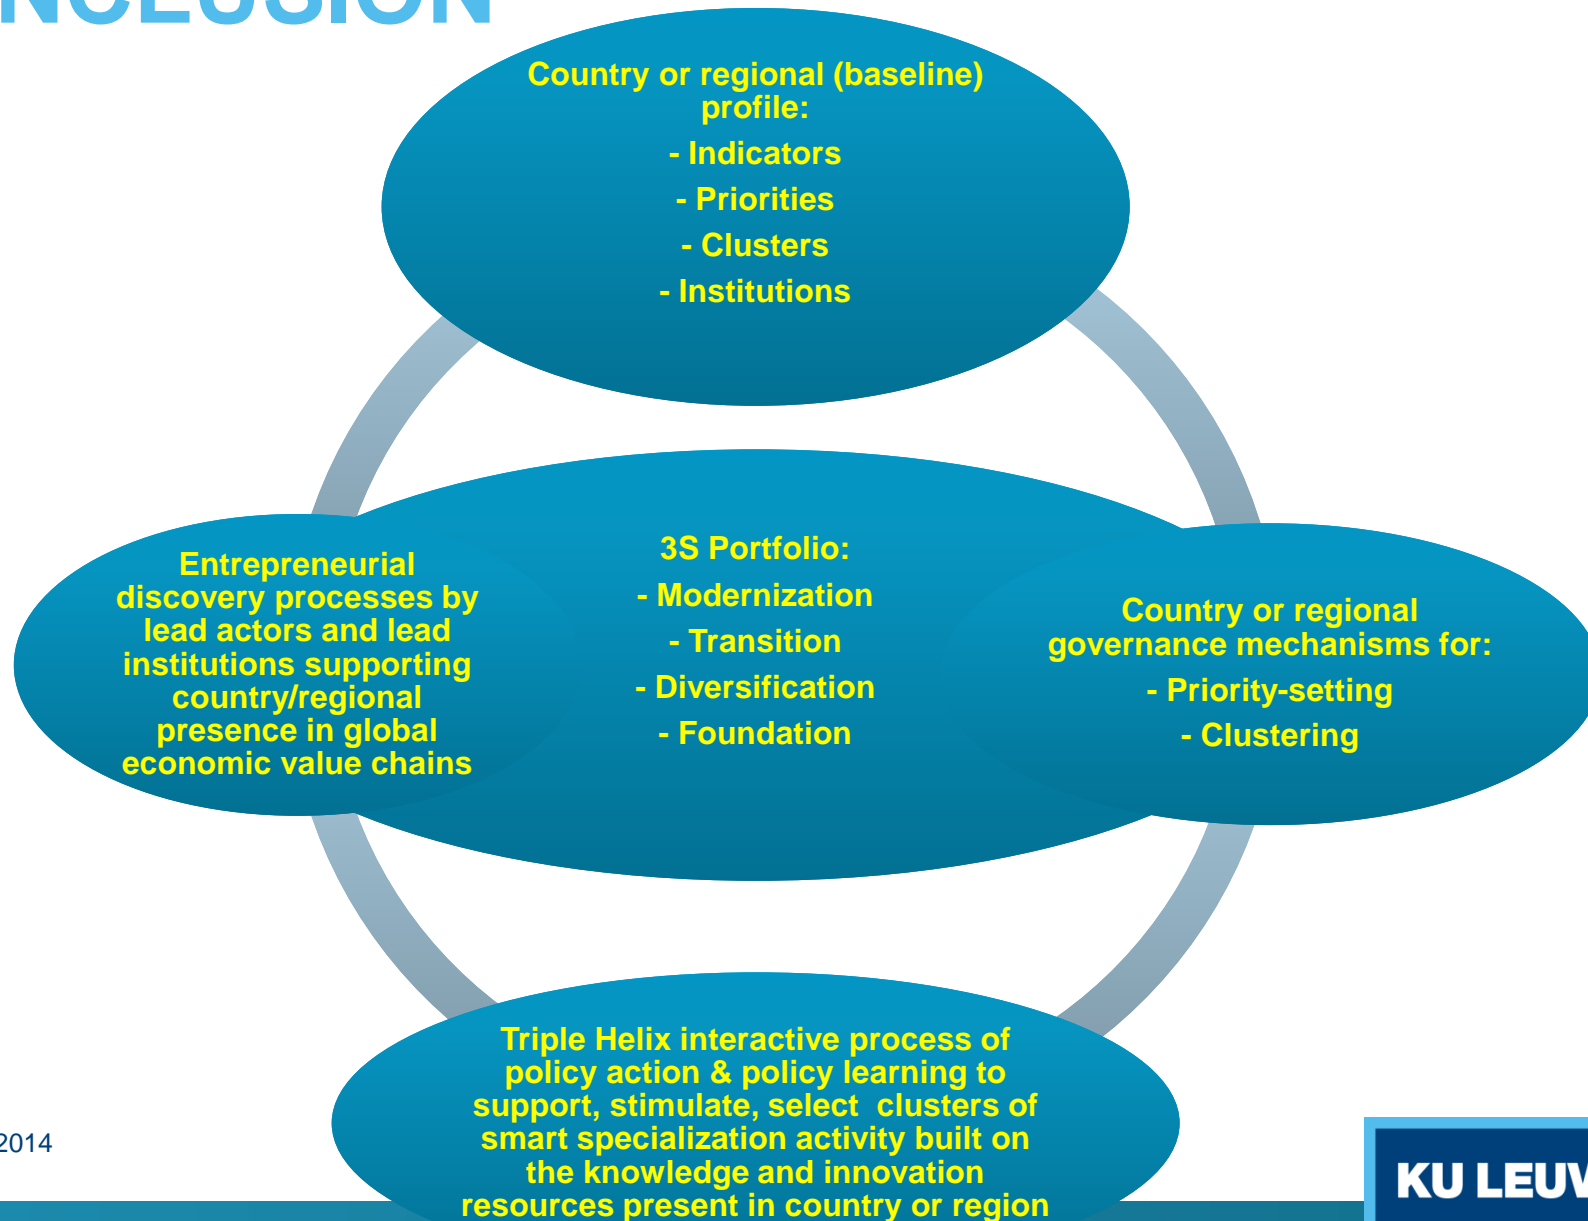

11-6-2014

What about Flanders?

- An emergent strategic cluster portfolio for the Flemish region:
 - Radical foundation (e.g. Nano for Health, BioLife)
 - Transition (e.g. Chemistry, Materials, Advanced Manufacturing – 3D Printing – Precision E, ICT-iMinds)
 - Diversification (e.g. Food)
 - Modernization (e.g. Manufacturing – Automation / Robotisation, Bike Valley, ICT-iMinds)
- Smart specialization as a concept at the nexus of innovation policy, industry policy (NIB) and transition policy (ViA).

CONCLUSION
